PROFESSIONAL SUMMARY

Experienced in statistical modeling, visualization, and reproducible analytics using Python, SQL, R, and modern data tools to produce clear visualizations, documentation, and demos that support data-driven product decisions and real world big picture use.

AREAS OF EXPERTISE

- | | | |
|---|--|--|
| <ul style="list-style-type: none">• R & RStudio, Java & JavaScript, HTML, CSS• Python & SQL for Large-Scale Data Analysis• Predictive Analytics | <ul style="list-style-type: none">• Statistical Modeling• Reproducible Workflows & Documentation (Jupyter, RMarkdown, Git, VSCode)• Data Visualization (Tableau, Python, R, Excel, observable) | <ul style="list-style-type: none">• Business Modeling & Applied Problem-Solving• Cross-functional collaboration• Presenting to technical & non-technical audience.• Fluent in Arabic, professional in English and German. |
|---|--|--|

RELEVANT PROFESSIONAL EXPERIENCE

Tech Safety Student Experience Intern, College of Idaho | Caldwell, ID Sept/2023 -Dec2023

- Increased platform engagement by 68% by systematically testing new student success tools, identifying usability barriers, and translating findings into clear, actionable feedback that guided product refinements.
- Improved feature adoption by analyzing student interaction patterns and recommending workflow changes that helped the product team prioritize what mattered most to users as well as creating awareness workshops and media..
- Strengthened decision-making by synthesizing qualitative user feedback with basic quantitative trends, enabling administrators to understand *which* certain features succeeded or failed and adjust strategy accordingly as well as incorporated user feedback changes for future annual sessions..

Data Science Project: Mental & Overall Health Predictive Modeling (Python) | Willamette University Sept/2025-Dec/2025

- Demonstrated strong analytical reasoning by cleaning, modeling, and visualizing a highly messy and unorganized 10,000+ response survey, uncovering high-accuracy predictors of overall health and mental health geographical segments locating lowest mental health segments with statistical precision.
- Applied a variety of analytical techniques—including correlation, demographic segmentation, heat maps and regression—to identify meaningful classifications and reveal relationships in wellness data.
- Delivered consistently accurate insights through clear and diverse visualizations methods, providing information policy makers can take.

Data Science Project: Tuition Cost Drivers & Predictive Modeling (R) | Willamette University Sept/2025-Dec/2025

- Displayed strong analytical reasoning by cleaning, modeling, and visualizing multi-year tuition, demographic, and institutional data(2011-2021), I addressed the most statistically accurate living arrangements link to rise of college costs and delivered insight that identified meaningful trends, best practices to lower costs based on living arrangements, and anomalies with precision.
- Produced a reproducible deliverable (RMarkdown report and visualizations) and presented findings to both technical and non-technical audiences to classmates and instructors.

EDUCATION

MBA/MSDS | Willamette University | Salem OR 2024-2026

Bachelor in Computer Science, Minors: Visual Arts and Psychological Education | The College of Idaho, Caldwell, ID 2020-2024

IB | UWC Red Cross Nordic (UWCRCN) | Flekke, Norway 2016-2019
